Lighting Council Australia

Lighting Council Australia is the peak body for Australia's lighting industry
For more information visit, www.lightingcouncil.com.au

- Over 90 member companies.
- Code of Conduct binding on members with an emphasis on the supply of energy efficient, safe products that conform to Australia's regulatory requirements.
- Bryan Douglas, CEO, Lighting Council Australia was recently appointed the Secretary General, of the Global Lighting Association. www.globallightingassociation.org

Background to the scheme

- FluoroCycle is part of the National Waste Policy.
- FluoroCycle was initially funded by the Council of Australian Governments (COAG) Standing Council on Environment and Water.
- FluoroCycle transitioned to Lighting Council Australia in July 2013.
- FluoroCycle is now fully funded and operated by Lighting Council Australia.
- One of the drivers for establishing the FluoroCycle scheme was the Australian Government's international obligations through the United Nations Environment Programme (UNEP).

International drivers - Minamata Convention

- In February 2009, the Governing Council of UNEP agreed on the need to develop a global legally binding instrument on mercury, the Minamata Convention.
- It is anticipated that the Australian Government will agree to ratify this agreement.

National Waste Policy & The Product Stewardship Act

Less waste, more resources

- The *Product Stewardship Act 2011* came into effect on **8 August 2011**.
- The *Product Stewardship Act 2011* provides the framework to effectively manage the environmental, health and safety impacts of products and in particular those impacts associated with the disposal of products.
- The framework includes **voluntary, co-regulatory and mandatory** product stewardship initiatives.

What is FluoroCycle?

FluoroCycle

- FluoroCycle is a voluntary product stewardship scheme designed to increase the recycling rate of waste mercury-containing lamps.
- 90% of lamps that contain mercury end up in landfill.
- 90% of this waste is generated by commercial & public lighting.

Australian Government Accreditation

- The Hon Greg Hunt MP, Minister for the Environment, officially announced the accreditation of the FluoroCycle scheme on 12 September 2014.
- Accredited voluntary product stewardship arrangements are authorised to use the Australian Government's Product Stewardship logo.
- FluoroCycle's use of the logo signals to business and the community that the scheme represents best practice for an Australian product stewardship initiative.

Which lamps contain mercury?

Compact Fluorescent Lamps

generally contain between 1 and 5 milligrams (mg) of mercury*

Fluorescent U-Tubes

from 3 to 12 mg

Linear Fluorescent Lamps

from 1.2 to 15 mg*

Mercury Vapour Lamps

content varies considerably with wattage
from 25 mg in a 75 watt lamp
to 200 mg in a 1500 watt lamp

Metal Halide Lamps

from 20 mg (35 watt lamp)
to 145 mg (1000 watt lamp)

High Pressure Sodium/Ceramic Arc

From 10 to 100mg
in a (20 to 1,000 watt lamp)

* As required by mandatory Australian Standards

All the elements in lamps can be recycled

Mercury (Hg)

Glass

Phosphor Powder

Aluminium

The Recycling Process

- It is essential that waste lamps are not broken while being transported to the recyclers or collectors.
- Once a lamp is broken the mercury may be released.
- At the end of a lamp's life the majority of the mercury remains in the phosphor powder.
- The lamps are crushed to extract the phosphor powder.
- The phosphor powder is then placed in a mercury retort to recover the elemental mercury.

Different Lamp Recycling Options

- Stillage Bins.
- Prepaid Boxes.
- Boxes on site.
- Electrical contractors collect waste lamps during scheduled re-lamping.
- Collected during scheduled waste collection and passed on to a recycler.

Recyclers and collectors

The benefits of Signatory status?

- Signatories are listed on the [FluoroCycle website](#)
- Signatories may display the FluoroCycle logo with the Australian Government Product Stewardship logo on their communication material such as annual reports and websites.
- Signatories may be included in media releases, case studies, articles and public recognition events.
- There is no fee to apply for Signatory status.

How can we apply to be a Signatory?

FluoroCycle

Organisations can apply online at:

www.fluorocycle.org.au

Over 250 Signatories across Australia
